

# Expertise in Sanitary Processing

Design Furnish Install Control

From concept to completion

# About RWS

Since 2002, RWS has been defining modern sanitary process through innovative ideas and effective system designs. This expertise extends into the food, dairy, brewing, personal care and beverage industries with a niche specialty in ESL and aseptic processing. Evolving beyond our roots as a start-up controls group, RWS has grown significantly over the years. This growth has resulted in recognition from major processors in North America as the team to rely on for the most cost-effective and energy-efficient processes for your operations. Our philosophy of assigning a “team” that follows you through the entire project, from start to finish, has delivered proven results for our customers. This core team approach helps build strong customer relationships that ensure RWS is delivering on our commitment to making your project an enviable success. Our focus is on meeting your highest expectations, putting processes in place to achieve the efficiency you desire, and effectiveness you need to run at optimum productivity.

#### Our System Integration Services include, but are not limited to:

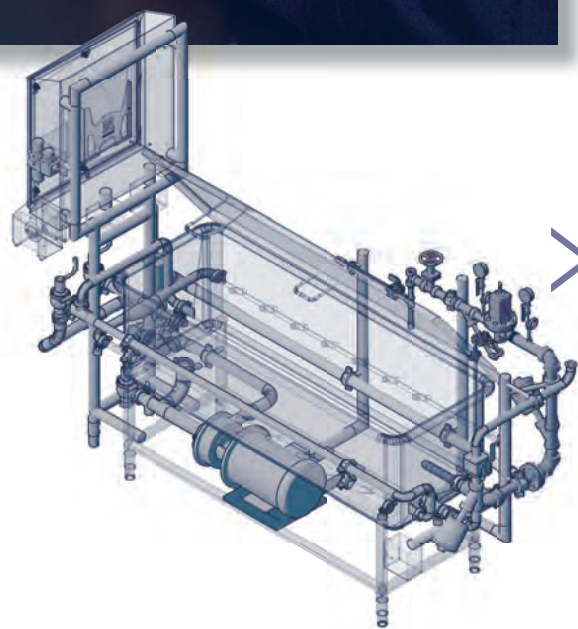

- Project Scope Definition
- Process Engineering, Design, Project Management
- Process Automation and Control Expertise, Software Development, On-Site Troubleshooting & Service
- ASME Certified Custom Skid Fabrication by RWS
- UL Approved Electrical and Control Panel Fabrication
- Complete Equipment and System Supply from Industry-Leading OEM's, Including Installation and Integration
- Complete Turnkey Project Management from Receiving Bay to Fillers
- OEM Parts Supply Programs
- Operator Training and Coaching
- On-Site Service & Repair

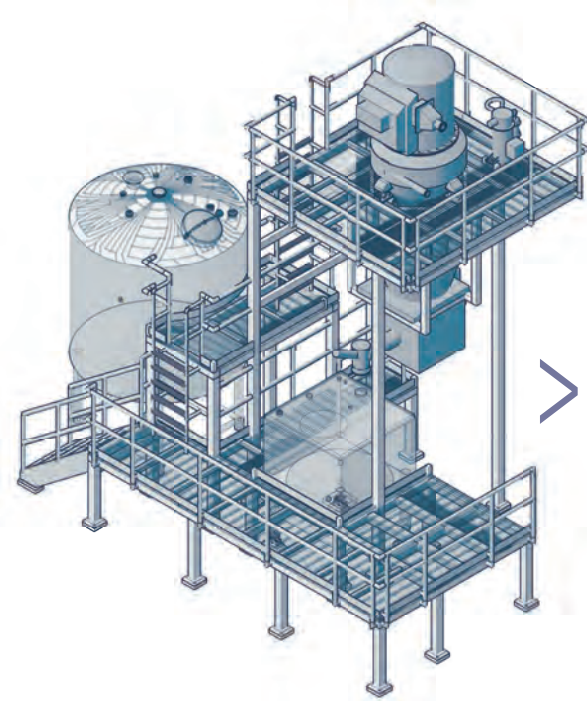

In addition to our core team of engineering, sales, automation and project management professionals, RWS has established a nationwide network of OEM vendor/partners that collaborate with us to provide a broader scope of product knowledge, project consultation, customer service and technical support. We carefully select these partners in our network, to further ensure that RWS delivers the best, most current and complete integrated processing solution that meets your needs...and surpasses your expectations.

#### Our Strength is in Our Controls and Automation Expertise

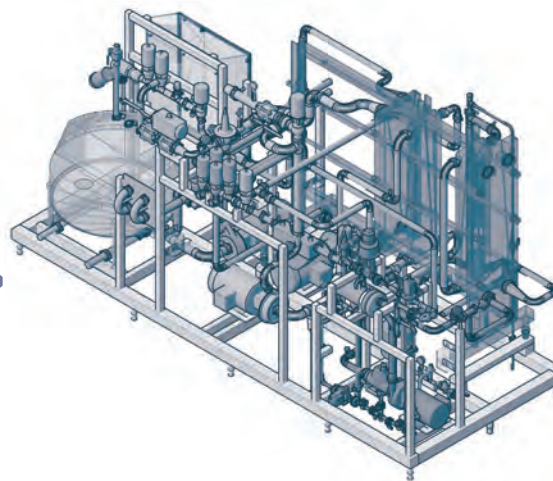

# >Design>>>

# >>>Furnish>>>

# >>>Install>>>

# >>>Control>

Our mission is to design, engineer, furnish and install the necessary equipment and systems that will provide our customers with peak processing performance, as economically and efficiently as conceivable. RWS accomplishes this with seamless integration into your operations, and on your scheduled timeline. Our customized process solutions are reliable, efficient, environmentally friendly, offer low-maintenance, and produce high-quality results to meet your specific applications. RWS Design & Controls' commitment to our customers does not end on the delivery date, as we will continue our relationship by providing superior technical support, recommended spare parts and ongoing service, well after the startup of your system.

#### From Single Product Concept to Complete Turnkey Responsibility

RWS Design & Controls' engineers furnish and install the process equipment, skidded systems and automated control systems that will best fit the requirements of your project. We specialize in personalized, custom solutions for applications such as: thermal processing, ESL and aseptic processing, separation technologies such as evaporation and filtration, fluid handling, bulk material handling, homogenization, mixing and blending, cleaning (CIP/COP) and recovery, heat transfer, water treatment, and a wide variety of specialized, sanitary processing needs. Starting at your receiving bay through to your fill and finish line, our design engineering team at RWS is ready to provide you with an integrated turnkey solution, or we can assist you in the recommendation, specification and supply of the right processing equipment for your exact needs.

#### As our customers' processing needs grow, RWS grows with them. It's that type of interaction that makes us an asset – "your asset."

- Heat Transfer
- Mixing and Blending
- Separation Technology
- Cleaning and Recovery
- Fluid Handling and Homogenization
- Tanks and Silos
- Automation and Control

# Our Headquarters

The professionals at RWS Design & Controls have well over a hundred years of combined food and beverage experience. This allows us to offer superior process design, fabrication and installation that will optimize your every need – from time and space concerns, to minimum maintenance issues, to peak efficiencies. Our engineering staff will customize exactly what you need to give you the most cost-effective and energy-efficient system without compromising the integrity of your product.

Truly understanding exactly what is needed is RWS' first step. RWS uses that knowledge to create the ultimate processing system, which becomes your advantage. Our passion is solving customer problems, meeting their processing needs, and guaranteeing complete satisfaction.

Our dedicated team of experts and professionals welcome the opportunity to demonstrate our capabilities and solve your specific processing needs! Come join the list of many satisfied customers who realize that RWS Design & Controls really does make a difference.
